SKYGLIDER

Blimps aren’t built for speed, they’re built for distance. They can fly for days on only a little bit of fuel!

Your challenge is to DESIGN and BUILD a blimp that flies as straight and far as possible.

Okay, Design Squad ready for takeoff? Let’s get these things airborne!

Connect your balloons. Will they be wide face to wide face? Thin edge to thin edge? Upside down? Thin edge to wide face? Parallel or perpendicular?

BRAINSTORM

Think about shape. Your blimp has to slice through the air.
