

When Tiny goes on a **Nature Trackers** adventure to visit her favorite flowers, she is sad when she sees them wilting. Mr. Conductor shows her that every living thing changes during its life cycle.

Seeds grow into little plants. Then the plant grows flowers. When the flowers wilt, the petals and seeds drop to the ground where they can grow into new flowers!

You can be a **Nature Tracker**, too! Observe what kinds of plants and flowers are growing in your neighborhood.
